MOVES6 default database
240 tables, Parquet, read with DuckDB
Exhaust, brake and tire
Source bins and fuel usage
movesr_sourcebins()
Operating modes (drive cycles, VSP)
movesr_opmodes()
Base rates: source−bin weighting,
air conditioning, EV adjustment
Fuel effects: general ratios, Complex and
Predictive Model, sulfur model
Meteorology, temperature, humidity, I/M
Running, start, brake, tire rates
and chained pollutants
Evaporative
Activity: population, VMT, SHO, SHP
movesr_activity()
Tank temperatures and soak fractions
movesr_tank_temperature() (exact)
movesr_tank_temperature_simple()
Tank fuel RVP and ethanol
movesr_average_tank_gasoline()
Permeation, vapor venting, leaks
movesr_evap_rates(), movesr_tvv_hourly()
MOVES−format rate tables
movesr_export_vein()
MOVES6 runs (Java, MariaDB, Go)
golden sets, row−by−row comparison
vein: moves_factors(), ef_moves(),
ef_moves_start(), ef_moves_evap()
